

Boletín Epidemiológico Semanal

El Boletín Epidemiológico Semanal es el instrumento de difusión oficial que utiliza la MSP para dar a conocer la situación epidemiológica de los eventos sujetos a notificación obligatoria que se vigilan a través del modulo de vigilancia especial y del modulo de alerta temprana.

Enfermedades/eventos de vigilancia individual

- *Cólera
- *Dengue Clásico\Hemorrágico\SSD
- * Difteria
- *Enfermedad Febril Eruptiva
- *Enfermedad Febril Respiratoria (ETI-IRAG)
- *Enfermedad Meningocócica
- *Exposición Rábica\Rabia Humana
- * Malaria
- *Meningitis todas las formas
- *Parálisis Flácida\Poliomielitis
- *Tétanos Neonatal
- *Tétanos otras edades
- *Tosferina
- *Sintomático respiratorio/Tuberculosis
- *Muerte Infantil
- *Muerte Materna

Rabia: durante esta semana se notificaron e investigaron 6 casos de rabia animal 5 caninos y 1 murciélago, procedentes de Santo Domingo, el Distrito Nacional y Santiago. Todos negativo al laboratorio. A la fecha el sistema ha captado 29 casos lo que representa un decrecimiento de un 62% en comparación con el mismo período del año 2010. Se continua con los controles de foco en áreas donde aparecen casos positivos de rabia animal, además de vigilancia y seguimiento de las agresiones animales a nivel de todo el territorio.

Leptospirosis: en esta semana no se reportan casos probables.

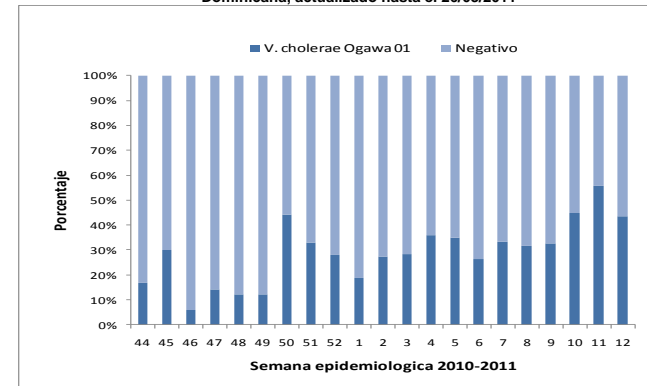

(**) No casos año previo
